

## e-Learning offers one of the most effective ways of preparing for IBM mastery tests

### e-Learning Courses Mapped to IBM z/OS Mastery Test

Atlanta, USA (January 15, 2008) - Interskill Learning has released a special Learning Plan mapping specific mainframe e-learning courses to the IBM System z Entry Level for z/OS System Programmer Mastery Test (Test Z01).

“Teamed together, the Learning Plan and e-learning courseware offers one of the most effective ways of preparing for this important IBM mastery test” said Interskill Learning’s American Vice President, Darren Surch.

IBM actively endorses the mastery test as a standard for z/OS mainframe data centre personnel. “Used to verify the mastery of knowledge covered in a course or a defined set of learning materials...(they) help to assure an individual has achieved a foundation of knowledge and understanding of a subject matter.”

Promote excellence in z/OS amongst your workforce and ensure your employees possess a thorough understanding of z/OS operations. The Interskill Learning Plan provides an excellent benchmark for training within your department.
