

**Console skills are vital to all mainframe personnel to avoid catastrophic errors.**

## **NEW z/OS v1.10 Console Simulator Now Available**

Interskill's new z/OS Console Simulations provide real-world expertise and hands-on practice at monitoring z/OS system activity and resolving day-to-day z/OS system issues using console commands.

Mainframe industry veterans possess years of experience and knowledge, yet many current generation personnel have little or no experience. Given that over 30% of the workforce is due to retire in the next five years, there could be no better time than NOW to inexpensively train the next generation of mainframers in this essential discipline.

### **Customise the Console Simulations to Your System**

Even though many mainframe data centres run basically the same software, different configurations processes result in many variations. Errors produced are unique to your organisation. Interskill's console simulations can be quickly and simply customised to mimic your environment. Just think of the value of having your team well practiced at a manual IPL and shutdown on YOUR SYSTEM!

To learn more about how Interskill Learning's z/OS Console Simulations call +44 (0) 1625 441120 or visit [www.interskill.co.uk](http://www.interskill.co.uk).
